Max-Planck-Institute of Biophysics

The Max Planck Institute of Biophysics is an internationally leading research institution in the fields of structural biology, biophysics and cell biology located at the center of the Frankfurt science campus. As part of the Max Planck Common Call (https://www.mpg.de/career/commoncall), we invite

Max Planck Director Nominations

including self-nominations. Nominees should hold an advanced degree in Physics, Life Sciences or related disciplines and have a track record with distinguished achievements in their scientific field. Their internationally competitive research program complements the overall research program of the institute, which ranges from membrane biology to subcellular architecture and logistics. Our institute offers cutting-edge central facilities that include large scale computing, cryo electron microscopy (including 2 Titan Krios), mass spectrometry (including several Orbitraps), mechanic and electronic workshops, protein production and cell culture facilities, and light microscopy. We particularly encourage nominations in the following scientific areas:

**Biophysics**
structural biology, proteomics, metabolomics, advanced light microscopy, molecular labeling and spectroscopic techniques

**Bioinformatics**
artificial intelligence, integrative structural modeling and simulation, image processing, pathway engineering

**Cell Biology**
molecular transport, organelle contacts and biogenesis, synthetic organelles and self-organization of subcellular architecture, cell to cell communication, microbial communities
For general information about the application process please contact nominations@gv.mpg.de. For inquiries about the Max Planck Institute of Biophysics please contact: career2019@biophys.mpg.de.

The Institute and the Max Planck Society intend to enhance the proportion of women in areas where they are underrepresented, and they are therefore especially encouraged to apply. The Max-Planck Society welcomes and encourages applications by disabled individuals.
